

## BEST Electronic Cigarette Reviews Compare Safer and Better Electric Cigarette Brands

***Best Electronic Cigarette Reviews reveals a different aspect of Electric Cigarettes. Which E-cig brands have been laboratory tested and certified? Is E-cigarette manufacture properly regulated?***

**Online PR News – 11-January-2012** Since the introduction of Electronic Cigarettes to the European and American markets, several questions have been raised repeatedly. What is the Best Electronic Cigarette? Are all Electric Cigarette brands truly free of tobacco combustion products like tobacco tar, carbon monoxide and other toxic substances? Which electronic cigarette manufacturers have obtained certifications confirming their products are standardized? These are the main questions addressed by [Best Electronic Cigarette Reviews](#).

Are Electronic Cigarettes Free of Tobacco?

---

**Are Electronic Cigarettes really Free of tobacco combustion products like tobacco tar and carbon monoxide? Do all E-cig manufacturers properly regulate the process of production? Are the nicotine levels properly regulated? Which Electric cigarette brands have been certified by independent laboratories for their chemical composition and electronic components?**

---

Many electronic cigarette manufacturers and retailers claim their E-cigs to be free of tobacco, tar, ash, and carbon monoxide. However, as the Best Electronic Cigarette Reviews team points out on their article named [Is your E-Cigarette FREE of Tobacco?](#) many of the vapor cigarette manufacturers that claim their E-cigarette to be free of tobacco tar and other tobacco combustion byproducts, do not necessarily provide proof for their claims. Only a handful of E-cigarette manufacturers have actually tested their products using independent laboratories and have analyzed the chemical composition and/or electronic components of their electric cigarettes. <http://www.BestElectronicCigarettesReview.org/> lists some of these E-cigarette manufacturers that have obtained certifications from third party laboratories and/or institutions.

Electronic Cigarette Manufacture process needs to be properly regulated.

As the Best Electronic Cigarette Reviews team outlines on their article named [SAFE E-Cigs vs UNSAFE E-Cigs](#), this may not be the case with all brands of vapor cigarettes in the market. They point to a study by the FDA which reported certain inconsistencies in a sample of electronic cigarette cartridges tested. These irregularities are one reason why the FDA has not approved electronic cigarettes as a smoking cessation device in the US market. The above article provides a simplified summary of this report from the FDA.

SAFETY FIRST – CE and RoHS certifications

“Most online electric cigarette reviews focus on features of electronic cigarettes like the quantity of vapor produced, battery life, the number of drags per cartridge, the number of flavors available etc. These are all valid points to be considered in any electronic cigarettes review. However, it is equally important to be

“SAFETY FIRST is our motto! You should always try to answer these questions before you choose a particular brand of vapor cigarettes. How trustworthy is the E-cigarette manufacturer? Has their product been certified by a third party? Do they carry the CE or RoHS certifications confirming the safety of their product? Electronic cigarette reviews by <http://www.BestElectronicCigarettesReview.org/> address these safety concerns that others tend to overlook and that’s why it is a must read for anyone that is serious about the safety and potential health hazards of electronic cigarettes” Greene adds.
