### Cloud.bg Hosting WebHostingDay 2010

**Cloud.bg, an European Hosting provider that enables site owners to use cPanel/WHM on the cloud announced the release a discount code WHD10. The code provides 25% instant savings to anyone who signs up for company's sCloud Shared Cloud hosting service. The code expires on March 31, 2010.**

**Online PR News – 15-March-2010** Cloud.bg (<http://www.cloud.bg/en>), a premier European **Cloud Hosting** provider kicked off a promotional code WHD10 to mark its attendance to the largest web hosting industry industry gathering in Europe - WebHostingDay10. The code provides 25% instant saving on any subscription period of sCloud cloud hosting plan. It cuts the regular price of the plan (€20/mo) to €15/month. On annual basis sCloud will cost €180/year, instead of €240 for anyone who decided to sign up before March 31 and to use code WHD10.

"Cloud.bg's SCloud plan is the most affordable Cloud Hosting solution on the European hosting market even without the coupon code WHD10", said the founder of the company Dimitar Avramov. He added that Cloud.bg's management team has decided to release the WHD10 discount code to mark this year's WebHostingDay. "We wanted to demonstrate the importance of WebhostingDay 2010 conference which will move the EU based hosting industry another step closer to the cloud computing", said the founder of the Eu based cloud host.

Cloud.bg attracted a lot of attention in the web hosting industry this January when it announced the launch of the first Shared Cloud Hosting service in Europe which enables site owners to use the most popular hosting automation panel cPanel/WHM in a cloud environment. The web host uses **Fuscan Linux Cloud** (<http://www.fuscan.com>), an enterprise hosting automation platform of SingleOS to run cPanel/WHM on top of a load-balanced and a fully redundant clustered server infrastructure.

The Cloud.bg's customers take advantage from using a scalable hosting service without a need to dealing with a management of virtual environments. All site owners have to do is to use the cPanel familiar interface. Besides the SCloud Hosting (<http://www.cloud.bg/cloud-hosting>) service mentioned above, the provider also offers Reseller Cloud Hosting accounts manageable through cPanel's WHM (Web Host Manager).

The new cloud hosting brand has recently announced a promotional campaign over 12 different national top-

level [Domain Names](http://www.cloud.bg/en/domains) (<http://www.cloud.bg/en/domains>) of European countries. From February 10th until March 31st 2010 Cloud.bg offers anyone who chooses Cloud.bg to move to the clouds to register or extend the registration of their .co.uk, .de, .fr, .es, .it, .at, .be, .nl, .dk, .li, .ch, .me and .eu domain names for free. The registration process is fully automated for all domains. The only requirements that the cloud customers have to comply with are those of the national registries which operate the domain extensions.

Cloud.bg announced that the average round-trip delay (RTT) time for European home users who ping Cloud.bg ranges from 1.5 ms to 60 ms. Pinged from London Cloud.bg is reachable for 47 ms or less, from Ljubljana, Slovenia - 35 ms, from Paris - 71 ms or less, from Madrid - 77, from Berlin - 47 ms, from Sofia, Bulgaria - 1.5 ms. The average RTT for Israel is 97 ms. The cloud is currently located in a facility owned and operated by Interoute, one of the premier European providers of data center solutions.
