

San Francisco Hood Cleaning Company's Fabrication Facility Celebrates Anniversary

American Professional Services (APS-Hoods) opened a fabrication facility in Placentia, California in August 2009 and since then, services to California restaurants have increased significantly.

Online PR News – 26-August-2010 PLACENTIA AND SAN FRANCISCO, CALIFORNIA— American Professional Services (APS-Hoods) is celebrating the 1st anniversary of its Placentia, California fabrication facility in August.

APS-Hoods, a Placentia and San Francisco hood **cleaning** company whose headquarters are in Denver, Colorado, opened the fabrication plant in August 2009 to better meet the increasing demand for its services in California, said CEO Massoud Farazandeh.

“We have worked throughout California since our company was founded in 1989,” Farazandeh said. “But a couple of years ago, we realized the fabrication facility was needed for space reasons, and because our California projects were increasing year after year.”

Opening a fabrication facility provided much-needed space to custom-fabricate kitchen hoods on site, as opposed to having to order standard hoods from other manufacturers. APS-Hoods had the equipment to do the fabrication for some time, but had no room to set it up.

Fabricating custom hoods is necessary in situations where a restaurant kitchen has restricted space and standard, prefabricated hoods do not provide the proper fit. Restaurant owners often choose custom-made hoods if they desire more flexibility in their kitchens.

Having this location has made it easier for the company to increase its San Francisco hood sales (http://www.wiredprnews.com/2010/07/07/los-angeles-hood-cleaning-company-offers-five-tips-for-improving-restaurant-fire-safety_2010070712421.html), he said. It’s also made it possible to launch mobile teams that serve all of California and Nevada.

“Depending on the amount of work, we have as many as five mobile teams traveling at any given time that report back to the Placentia facility,” said the San Francisco hood **installation** expert.

The mobile teams are routed to various jobs and may be on the road several weeks at a time while they service, clean and repair commercial kitchen hoods.

The Placentia plant has proved to be a wise business decision for the company.

“We had been getting more calls from the Bay area, and having a Placentia location has us pretty centrally located to most of our busiest areas,” said the San Francisco commercial hoods (<http://www.aps-hoods.com/services/index.php>) professional.
