BaByliss Pro Nano-Titanium Ionic Hair Dryer

BaByliss Pro introduces two high performance nano-titanium ionic hair dryers, Portofino and Torino. They are available in Canada at Fabove.ca now.

Online PR News – 01-September-2010 The nano-titanium series is a premium line of [BaByliss Pro](#) hair styling tools, including [flat iron](#) and [hair dryer](#), which offer a synergy of elegance and technology. Since their introduction, these tools have created a new standard in the beauty industry and earned a well-deserved reputation of providing powerful, quick, and professional performance.

BaByliss Pro released two high performance hair dryer this past summer: one in the full size format, named the Portofino hair dryer, and the other compact one named Torino.

These two new hair dryers have a sophisticated black housing with matt and glossy finishes, a divergence from the signature metallic blue look of the BaByliss Pro nano-titanium product range. They however, incorporate the same professional features; nano-titanium for superior heat conductivity and optimum heat performance and a built-in ion generator to lock in the hair's own natural moisture and eliminate frizz.

Both dryers also come aptly equipped with a diffuser and three nozzles for customized styling. The Italian design philosophy of attention to the smallest detail is evidenced by these dryers' stainless steel filter and anti-wrap fan design which prevents hair blockages.

With 1875 watts of power and a long life Italian AC motor, these new beauties will surely live up to the Italian way.

Features

1875 Watts

2 speed and 3 heat settings plus cool shot button
