

Los Angeles Fire Protection Company Offers Tips in Honor of National Fire Prevention Week

Nationwide Fire Protection Corp. will observe National Fire Prevention Week Oct. 3-9.

Online PR News – 06-September-2010 BAY AREA, LOS ANGELES AND PLACENTIA, CALIFORNIA— The Placentia and Los Angeles fire **protection** company Nationwide Fire Protection Corp. is observing National Fire Protection Week this October by sharing information on fire protection with current and potential clients.

National Fire Prevention Week is observed Oct. 3-9 this year and is sponsored by the National Fire Protection Association, said NFP General Manager Massoud Farazandeh, a fire detection system expert.

It has been observed since 1922 on the Sunday through Saturday that Oct. 9 falls each year, according to information posted on NFPA's website. The observance commemorates the Great Chicago Fire, which began on Oct. 8, 1871, but caused the most damage the following day on Oct. 9. The fire left 100,000 people homeless, killed more than 250 people, destroyed more than 17,400 structures and burned more than 2,000 acres.

"Most of the information available in honor of this week-long observance is geared toward residential fire safety," said Farazandeh, whose company specializes in Los Angeles fire **sprinkler** systems installations, inspections and service for restaurants and commercial kitchens. "We are broadening the focus a bit to encourage managers and owners of restaurants to take steps to ensure they are doing everything in their power to protect their property and employees from fires."

Nationwide recently released the follow tips:

Fire Prevention Tips

1. Have fire **suppression** systems inspected every six months, and tested once or twice annually. The testing is a pull system test, where the system must be set off to ensure it is in proper working order in the event of a fire.
2. Keep fire extinguishers charged at all times.
3. Have the links on nozzles replaced annually.
4. Make sure fire systems are up to code. As technology evolves, state and federal codes also change.
5. For restaurants, keep kitchen hoods clean and free of grease. This means cleaning hoods, ducts and fans every six months at a minimum, and more frequently, depending on the volume of food cooked and the types of cooking processes used.

Restaurants are the primary cause of big commercial fires, said Farazandeh, whose company installs Los Angeles fire suppression systems. These fires are caused by excessive grease in the hoods and ducts in 60 percent of restaurant fires.
